- *1 When the standby mode is set to eco, network functions such as power on over the LAN network will not operate, and the serial output terminal cannot be used. Also, only certain commands can be received for external control using the serial terminal. Only Taiwan model, 0.15 W.
- *2 Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
- *3 Only compatible with dot clock frequency of 27 MHz (pixel repetition signal)
- *4 WUXGA resolution is supported only when the signals are compliant with VESA CVT-RB (Coordinated Video Timing-Reduced Blanking).
- *5 With legs at shortest position.
- *6 Average value. May differ depending on models.
- *7 The operating temperature range is 0 °C to 40 °C (32 °F to 104 °F) when used at altitudes between 1,400 m and 2,700 m (4,593 ft to 8,858 ft) above sea level. When operating temperature exceeds 40 °C (35 °C at high altitude), lamp power may automatically switch to ECO in order to protect the projector.
- *8 Operation range differs depending on environments.
- *9 If the ceiling mount bracket of the ET-PKE200H or ET-PKE200S has already been installed, use the projector attachment for the ET-PKE200B.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

Note: When the fixed-focus lens ET-ELW21 is mounted, the optical lens shift function cannot be used.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

Note: When the fixed-focus lens ET-ELW21 is mounted, the optical lens shift function cannot be used.

Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

Aspect ratio 16:10

ET-ELW20	minimum	$L (m) = (\text{diagonal screen size in inches}) \times 0.027184 - 0.055400$
	maximum	$L (m) = (\text{diagonal screen size in inches}) \times 0.036907 - 0.053400$
<i>Supplied lens</i>	<i>minimum</i>	<i>$L (m) = (\text{diagonal screen size in inches}) \times 0.035717 - 0.050400$</i>
	<i>maximum</i>	<i>$L (m) = (\text{diagonal screen size in inches}) \times 0.060817 - 0.049700$</i>
ET-ELT20	minimum	$L (m) = (\text{diagonal screen size in inches}) \times 0.060837 - 0.113900$
	maximum	$L (m) = (\text{diagonal screen size in inches}) \times 0.099163 - 0.112800$
ET-ELT21	minimum	$L (m) = (\text{diagonal screen size in inches}) \times 0.099411 - 0.212700$
	maximum	$L (m) = (\text{diagonal screen size in inches}) \times 0.157867 - 0.210700$
ET-ELW21	(fixed focus)	$L (m) = (\text{diagonal screen size in inches}) \times 0.017379 - 0.057231$

ET-ELW21	(fixed focus)	$L (m) = (\text{diagonal screen size in inches}) \times 0.017862 - 0.057231$

• Distances calculated with the above equations will include a slight error.

Shift range

Optical axis shift function allows to shift the position of a projected image as shown below.

- The ET-ELW21 is a fixed short-focus lens. Therefore, the lens shift function provided in the main unit cannot be used.

Installable angle

Install the projector at an angle within the range shown below.

• **Vertical direction**

The projector may be installed at a vertical angle of $\pm 360^\circ$.

• **Horizontal direction**

The projector may be installed at a horizontal angle of $\pm 15^\circ$.

List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 100 kHz, vertical scanning frequencies of 24 Hz to 120 Hz, and a dot clock of 162 MHz maximum can be input.

NOTE: The native resolution of this projector is 1,280 × 800 pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

Serial connector

The serial connector complies with RS-232C. To control the projector from a personal computer, commands must be input through communication software, based on the format and satisfying the communication conditions shown below.

Pin assignments and signal names

D-sub 9-pin (female) Serial input

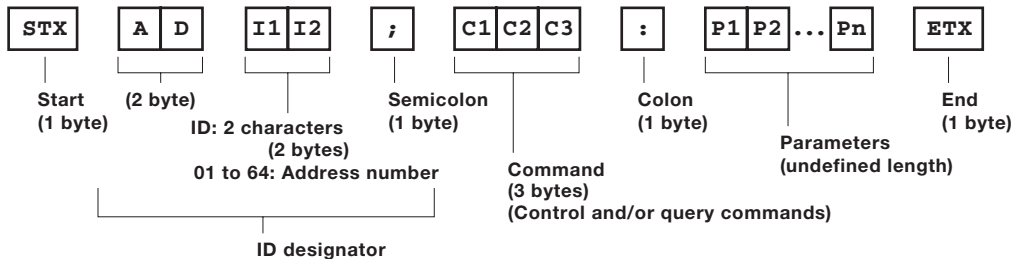

No.	Signal name	Description	No.	Signal name	Description
1	-	NC	6	-	NC
2	TXD	Transmitted data	7	CTS	Connected internally
3	RXD	Received data	8	RTS	Connected internally
4	-	Connected internally	9	-	NC
5	GND	Ground			

Communication conditions (factory setting)

Signal level	RS-232C-compliant
Synchronization method	Start-stop synchronization
Baud rate	9,600 bps
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

Basic format

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

CAUTION

- It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.
- When using two or more units, set different IDs for each unit.

Command example

To set the shutter function on, send the command as shown below.

```

STX   ADZZ ; OSH : 1   ETX

```

NOTE: When sending commands without parameters, a colon (:) is not necessary.

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector.
2. Make sure there is an unobstructed space of 1,000 mm (3 feet 3 inches) or more around the projector's exhaust openings.
3. Do not stack projector units directly on top of one another for the purpose of multiple (stacked) projection. When stacking projector units, be sure to provide the amount of space indicated below between them. These space requirements also apply to installations where only one projector unit is operating at one time and the other unit is used as a backup.
4. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
5. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.
6. If the projector is installed in an enclosed space, ensure that the projector's intake and exhaust openings are not blocked. Take particular care to ensure that hot air from the exhaust openings is not sucked into the intake openings.
7. When installing the projector in any manner other than floor mounting with the adjuster legs, use the four threaded ceiling mount holes (screw diameter: M6, projector interior thread length: 12 mm) to secure the projector.

Do not stack projector units directly on top of one another.

Direction of air intake and exhaust

Operating the projector continuously

1. If the projector is to be operated continuously 12 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
